

## **1    ABSTRACT OF THE DISCLOSURE**

2            An electrical ratchet wrench has a body, a motor, a battery set, a switch, a  
3 planet gear assembly, a connecting collar, a head and a ratcheting device. The  
4 motor is received in the body and has an output shaft with a pinion. The battery  
5 set is detachably received in the body and is electrically connected to the motor.  
6 The switch is electrically connected between the motor and the battery set. The  
7 planet gear assembly is received in the body and has a rotating base, a stub,  
8 multiple planet gears and a stationary collar. The connecting collar securely  
9 holds the stationary collar in the connecting collar. The ratcheting device is  
10 received in the head for driving a fastener to rotate and has a driven shaft  
11 connected to the stub on the rotating base. Accordingly, a cordless electrical  
12 ratchet wrench is provided and is convenient in use.
